Not within MoD safeguarding zones for buildings under 15m high.

Not within 10 metres of a Tree Protection Order.

Not within 100 metres of ancient or semi-natural woodland.

Underlying Agricultural Land Classification: 3 (1 is Agriculturally most valuable, 5 is least valuable).

Not within a quarry buffer zone.

Not within safeguarded route for roads or cycleways.

No Public Right of Way.

Not a Village Green.

Stage one commentary

Site is not wholly within a Site of Special Scientific Interest; Natura 2000 site; National, Local, Marine, Woodland Trust or Wildlife Trust nature reserve; or Scheduled Ancient Monument.

Does the site pass stage one site criteria tests? **Yes**

Stage two evaluation

Ownership P J Meyrick

General overview This site is an agricultural field on the western edge of Lydstep. The site is generally level but slopes sharply at the south east boundary.

Greenfield or Brownfield/PDL Greenfield **Estimated number of dwellings** 0

Adjoining uses and access The site has hedged boundaries with an area of scrub and verge separating it from the adjacent road. An existing access to the site is also located off the road. The site has agricultural land on three sides, with residential development to the east.

Visible constraints to development

Impact on National Park's Special Qualities This settlement sits within an agricultural landscape. Small and medium sized fields, occasionally with overgrown hedgerows, and interspersed with settlements and farmsteads dominate. The hedgerows provide important landscape elements, providing a tangible link to earlier settlement. There is a strong cultural and historical sense of place, typified by the medieval open field system which has survived well in the area. The majority of the settlement lies within the Manorbier historic landscape of special interest. The development of this site could erode the historic and cultural character typified by the medieval field system.

Landscape impact mitigation measures

Affordable housing capacity assessment

General notes

Development planning history

Planning application history (planning applications within, overlapping or adjacent to the potential site)

Summary of geological risk (class A is lowest risk, class E is highest risk)

Running sand class A; compressible ground class A; landslide class C; no soluble rocks; shrink swell class A

Summary of flood risk (from TAN 15)

Not within a TAN 15 zone

Consultee responses

Consultee	Date of response	Response
Countyside Council for Wales	01/04/2008	This site appears to support a mixture of woodland and scrub either across the entire site, or in places within the site. Although not designated sites, we advise that they should be considered under your Authority's general duty to have regard to conserving biodiversity, as set out in Section 40 of the Natural Environment and Rural Communities (NERC) Act (2006). We believe you can do this by ensuring that existing ecological connectivity is retained and opportunities for creating links are taken where appropriate.
Pembrokeshire County Council Highways	03/04/2008	Technically, access may be feasible at the middle of the site, subject to satisfactory visibility and pedestrian access being achieved.
Dwr Cymru	21/07/2008	Sewerage – Parts of the public sewerage network suffer from hydraulic overloading. No Regulatory improvements are planned under Dwr Cymru Welsh Water's current 5 year Capital Investment Programme. Should this site be developed in advance of any Regulatory improvements, developers may be required to fund the essential improvements.
Dwr Cymru	21/07/2008	Sewage Treatment - We have numerous Waste Water Treatment Works within the County which are designed to treat foul effluent from residential and commercial/industrial premises. The discharges from each of the Works are licensed by the Environment Agency to meet European Directives. Dependant on the scale of development identified within your proposed Local Development Plan the associated sewerage catchment, and may need to be upgraded as required to accommodate future growth.

Dwr Cymru

21/07/2008 Water Supply – Pembrokeshire Coast National Park is fed from strategic Water Treatment Works in the County. These water treatment works are important assets for Dwr Cymru/Welsh Water (DCWW) in delivering potable water to customers, Commercial, Health & Education premises. DCWW are developing a 25 year water resource plan to meet projected future demands for the County. Based on future demands already shared with us we do not foresee any problems at present in meeting the anticipated domestic demands during the life of the Local Development Plan. Water is a precious resource and in line with Government objectives on sustainable development we would look to promoters of developments to have considered and included where feasible, water efficient devices within buildings and sustainable drainage measures.

Reasons site is suitable for development

Reasons site is not suitable for development

The site would extend significantly into the countryside at the edge of Lydstep, and CCW consider that development may result in the loss of areas of scrub or woodland.

Does the site pass stage two tests? No

Proposed use
