### **Officer's Appraisal**

#### **Relevant Planning History**

No relevant history.

#### **Site & Context**

The application site includes a tarmacadam covered carpark, a designated recycling area, bike racks situated adjacent to a pedestrian foot bridge over the neighbouring water course. The car park has vehicular access via Brookside Villas. The car park is relatively flat and has clearly defined car parking spaces.

#### **Current Proposal**

The application seeks planning permission to site a carpark pay and display machine and associated signage depicting Fees and information. The position of the machine will be as shown on the location plan adjacent to the foot bridge opposite the vehicular access. The machine is to measure approximately 1.8m in height, 0.4m in width and 0.3m in depth. The sign is to measure 1.2m in width, the overall height off the ground being 2.1m.

#### **Key Issues**

The application raises the following planning matters:-

- Policy, Principle of Development and Impact on National Park
- Siting and Sustainable Design
- Highway Safety and Access
- Landscaping
- Biodiversity

*Policy, Principle of Development and Impact on National Park:*

Amroth carpark is located within Amroth Rural Centre as defined by the Local Development Plan Policy 6 Rural Centres, Criteria c) of Policy 6 states that the land use priorities will be to protect and enhance the Centre's range of facilities.

The proposal is of a modest scale. The proposal will not therefore have an adverse impact upon the character of the area or the wider landscape and therefore does not compromise the special qualities of the National Park and complies with Policy 1, 6, 8 and 15 of the LDP.

*Siting and Sustainable Design:*

The application is considered to be appropriately sited and is of a design which is comparable with many other pay and display machines within the Pembrokeshire Coast National Park. The pay and display machine is not illuminated.

*Amenity and Privacy*

The proposal will have no detrimental impact upon amenity or privacy, due to the nature of the pay and display machine and sign and its siting being away from any neighbouring properties. The proposals therefore comply with Policy 30 of the LDP.

*Highway Safety and Access:*

No response has been received from PCC Transportation & Environment at the time of writing this report; Members will be made aware of any further information received at the committee meeting. The application is considered to be in accordance with Policy 53 Impacts of Traffic.

*Biodiversity & Landscaping*

PPW, TAN 5 and LDP Policy 11 require biodiversity and landscape considerations to be taken into account in determining individual applications.

Natural Resources Wales have been consulted and gave no objection regarding the development and its impact upon the Site of Special Scientific interest, Nolton Haven Beach.

PCNPA Planning Ecologist had no comments to make regarding this application.

The proposed application is considered to be in accordance with PPW, TAN 5 and LDP Policy 11.

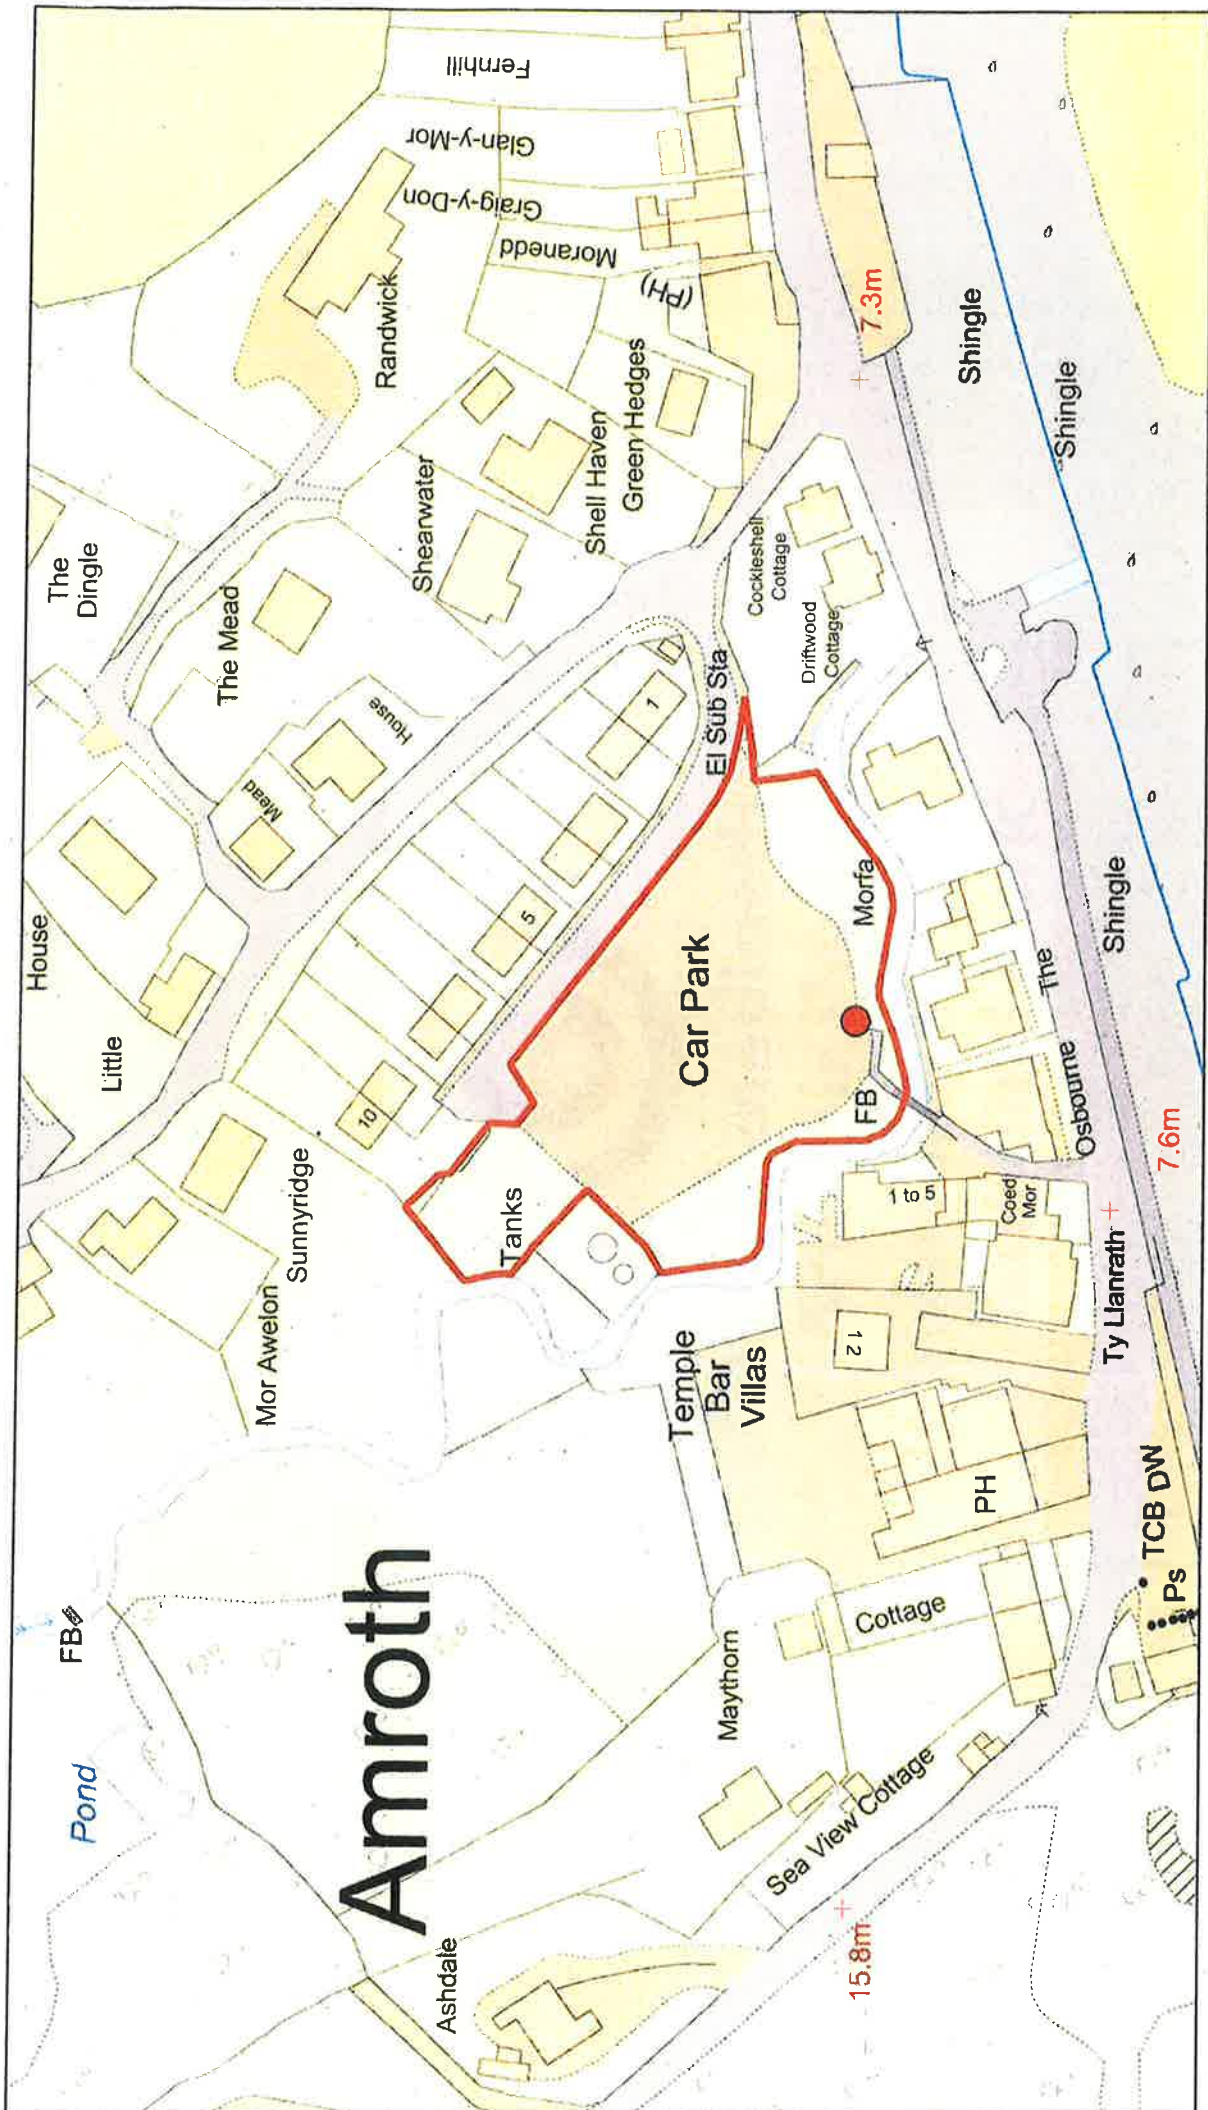

## **Conclusion**

The proposed pay and display machine and sign will not have an adverse impact upon the special qualities of the National Park or neighbouring Amenity. The proposal therefore complies with the relevant policies of the LDP and is recommended for approval subject to conditions.

## **Recommendation**

APPROVE, subject to the following conditions:

1. The development shall begin not later than five years from the date of this decision. **Reason:** Required to be imposed pursuant to Section 91 (1) of the Town and Country Planning Act 1990 (as amended).
2. The development shall be carried out in accordance with the following approved plans and documents: Elite Futureproof Parking Specification Sheet and Technical Specification (received 13 January 2020).  
Amroth Car Park Pay and Display Sign (received 13 January 2020)  
Amroth Car Park Layout Plan (received 28 January 2020)  
**Reason:** In order to be clear on the approved scheme of development in the interests of protecting visual amenity and the special qualities of the National Park. Policy: Local Development Plan – Policies 1 (National Park Purposes and Duty), 8 (Special Qualities), 15 (Conservation of the Pembrokeshire Coast National Park) and 29 (Sustainable Design).

WebAsian Back Office

Metric have pioneered the concept of Centralised Parking Management and our communications network (ASLAN) now links 28,000+ machines via GSM/GPRS technology. The real-time reporting technology provides management information which is vital to maintaining accurate, controlling revenue and the efficient deployment of personnel.

The provision of a two way communication link between the machine and the parking management office is an option for any operator. The alternative means information to be passed over a GSM, GPRS, LAN or Wi-Fi network allowing the parking operator complete management of the machine stock. Payment is not taken from the machine for all payments including tickets, coins, tickets, can use status, machine alerts plus a comprehensive log of all transaction data for auditing and computerised statistical analysis. The software is 100% web based and can be accessed from any web enabled device, integration with Google Earth & Google Maps and navigation services such as TomTom or Garmin is also included.

**ELITE**  
futureproof parking

# ELITE

the flexible solution to futureproof parking

## The Parking Professionals

Metric Group Ltd is a responsible and respected British Company with over 100 years of experience in the parking industry and over 100 years of design and manufacturing experience. Our machines for bus, train and revenue controls are installed worldwide. Metric have always manufactured equipment to a consistently high standard and provided first class after sales care and maintenance services.

The company's facilities include:  
 ISO 9001:2009 Quality Management  
 ISO 14001:2004 Environmental Management  
 ISO 27001:2005 Information & Security Management

## The No.1 Payment Solution

The Elite range of payment terminals allows the operator with a variety of options to control entry, pay & display is available to control the entry of pay-and-go cars on and off street. The Elite machines are now available to provide all weekend payment options for the car park operator.

Available on the Elite range of terminals include:

- Pay & Display Parking
- Pay by Space Parking
- Barrier Controlled Payments
- Alpha Integrated Payment Terminal
- Transport Ticketing Systems
- Electric Vehicle Charging

During the design and development of our terminals we ensure the machine will work in any environment. It has a compact size to ensure the terminals will work in the narrowest of spaces. Our terminals are WECC compliant, ISO 15118-2 and ISO 15118-3 compliant and are interoperable. The terminals have a rugged design to ensure they can be used in any environment.

The Elite range of terminals will provide the operator with the most secure and reliable payment solution available. The terminals are designed to be used in any environment and are fully compliant with all applicable standards.

- Coins
- Bank Notes
- Credit Card
- Debit Card
- Contactless Card / Device Payments
- Expense
- Smart Cards

Our terminals can be used in any environment. They are fully compliant with all applicable standards and are designed to be used in any environment. They are fully compliant with all applicable standards and are designed to be used in any environment.

## Superior Security

The secure section of the machine which we call the vault stores the coins and banknotes. This area of the machine is heavily protected in all aspects by highly sophisticated materials and secured by advanced electronic locking technology. Inside the vault is a fire-secure cash box for coins, banknotes and a detachable cassette terminal. The cash box is self-sealing on removal and has two entry points to allow manual handling.

The ability to operate area exchange terminals back to the front and collect the cash from the machine is a key feature of our terminals. This process and the machine is fully compliant with all applicable standards.

The collector has no access to the contents of the cash box and the entire process can be audited.

## Power Choices

The Elite has a standard power rating of 1000W. The terminals can also operate from mains electricity or a supply of 12V DC. In hybrid mode using either the solar or battery power source depending on the environment.

Power consumption has been reduced to effectively bring the power usage down to 0.5W in standby mode. The user interface can be used for solar operation.

## Product Support & Maintenance

Metric Group Ltd has the largest service network for its support terminals in the world. The terminals are designed to be used in any environment and are fully compliant with all applicable standards. The terminals are designed to be used in any environment and are fully compliant with all applicable standards.

Our bank office systems are supported by a team of systems and software engineers.

### Networking

The Elite can be networked to a central server or a local network. The terminals are designed to be used in any environment and are fully compliant with all applicable standards.

## Technical Specification

### Machine Dimensions

800mm (H) x 400mm (W) x 300mm (D)  
 Weight: 35 kg (Typical)

### Casework

Vandal resistant, tamper proof, weathering hardens and sections with composite security materials

### Standard Colours

Black, White, Stainless Steel, Green, Red, Yellow, Grey, Ultra-Clean White, Red, Blue, Silver, Gold  
 All with optional Anti-Graffiti Coating

### Power Supply

110V/220V AC single phase, Street lighting supply, battery operation and solar power fully battery backup

### Solar Power

Solar charged model supplied with 38Ah battery

### Hybrid Dual Power

Solar + Mains electricity

### Battery Power

38Ah battery supplied

### Operating Voltage

12V DC

### Operating Temperature

-20°C to +60°C

### Humidity

Up to 95% non-condensing

### Payment Systems

Coins, Bank Notes, Chip & Pin, Credit/Debit Cards, Mobile Pay, Tap, and Contactless Smart Cards

### Coin Acceptance

Electronic validation of up to 15 different coins of any currency

### Banknote Acceptance

Electronic validation of up to 15 different banknotes with acceptance of up to 64 different international banknotes

### Ticket Capacity

8000 tickets (240000) 110 in-stock, upon call

### Ticket Printing

The terminal includes graphics printing

### Single Ticket Size

60 x 90 mm (standard)

### Security

IP67 (outdoor) material, tamper proof

### Coin Box

6 face self-sealing, extra-secure

### Banknote Cassette

1000 notes maximum

### Backlit Display

12.1" (305 x 240) Colour - 24V/5A/3000 mAh

### Heater (Mains Electricity Only)

Standard - Thermally controlled, optional fault area heater

### Environment

90%+ recyclable, RoHS compliant, WEEE Applicable, CE Mark
